Ex 10 VISUALIZE DATA USING ANY PLOTTING FRAMEWORK

Aim:

To visualize data using any plotting framework in R Programming.

PROCEDURE:

- 1. Install R for windows.
- 2. Install R Studio.
- 3. Open R Studio and install packages

Thus R studio is set up successfully.

1) SCATTER PLOT

Program:

```
# Install ggplot2 (if not already installed)
```

install.packages("ggplot2")

Load the ggplot2 package

library(ggplot2)

Scatter plot of Sepal.Length vs Sepal.Width, colored by Species

ggplot(data = iris, aes(x = Sepal.Length, y = Sepal.Width, color = Species)) +

 $geom_point(size = 3) + \# Adds points$

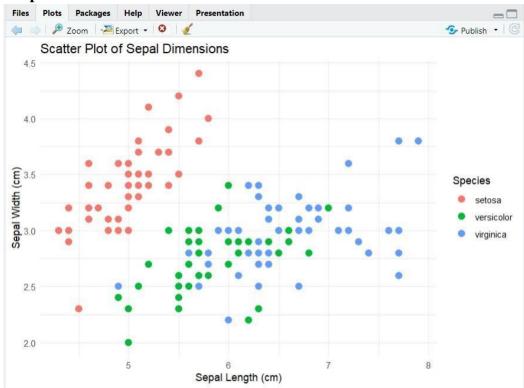

labs(title = "Scatter Plot of Sepal Dimensions",

x = "Sepal Length (cm)",

y = "Sepal Width (cm)") + # Adds axis labels and title

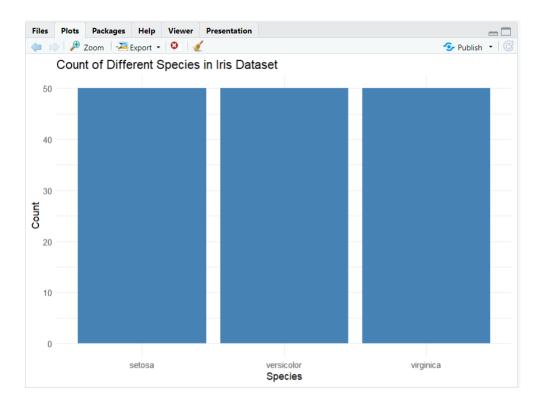

theme_minimal() # Applies a minimal theme

Output:

2) BAR CHART

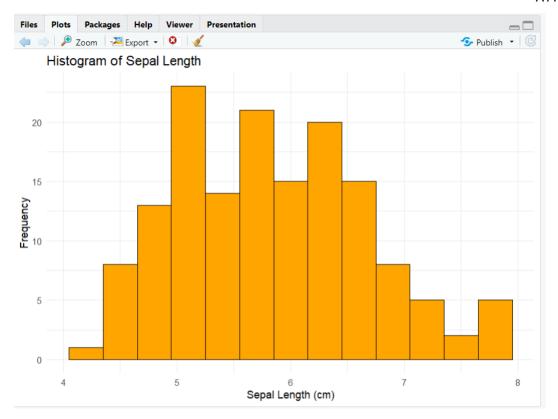

Program:

3) HISTOGRAM

Program:

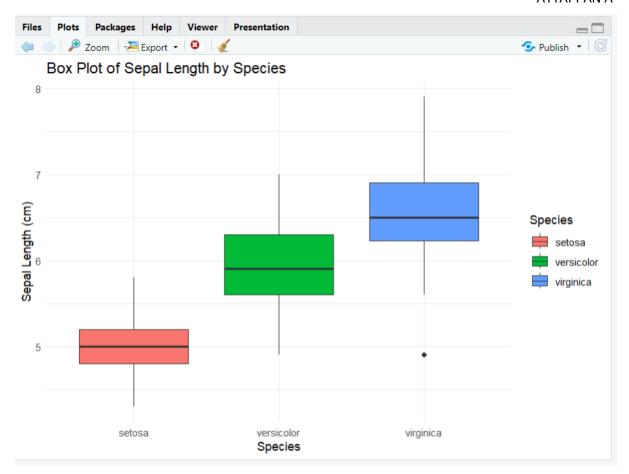

Output:

4)BOX PLOT

Program:

```
# Install ggplot2 (if not already installed)
install.packages("ggplot2")
# Load the ggplot2 package
library(ggplot2)
# Box plot of Sepal Length for each Species
ggplot(data = iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
geom_boxplot() + # Adds box plot
labs(title = "Box Plot of Sepal Length by Species",
        x = "Species",
        y = "Sepal Length (cm)") +
theme_minimal() # Applies a minimal theme
Ouput:
```

Result:

Thus the program to visualize data using any plotting framework in R Programming is implemented successfully.
